

PRESS RELEASE For immediate release

WareLite Ltd announces the creation of new Italian business development and distribution operation

WareLite Italia extend WareLite Ltd delivery capabilities in the Italian market with focus on partner solution development activities

Andover, UK, 7 March 2006 - WareLite Ltd, an innovative software research, development and marketing company, today announce the creation of WareLite Italia. This significantly extends WareLite's capability to support Partner Companies in the development and deployment of event-driven solutions to target both geographic and vertical market opportunities globally.

A joint venture with business angels and principal investors Maurizio and Edgardo Andreoli, WareLite Italia will distribute the WareLite BOSS real-time, event-driven, business process execution platform to the Italian market, and will also invest in supporting Partner Companies in the development of vertical solutions to drive markets both there and worldwide.

"This is a significant development for WareLite" says Elena Pasquali, WareLite CEO, "This investment will accelerate our growth in this important market, and will also firmly underpin our worldwide expansion."

"The WareLite BOSS platform is a unique and powerful technology for handling the extreme IT processing requirements emerging from developments in real-time sensor technologies and the Internet" says Maurizio Andreoli, "I am delighted to be able to invest in the potential of this technology for Italy and elsewhere."

Work will begin immediately on the development of Real Time IT Infrastructure Management Solutions in collaboration with Partners Esiet and Medan. Further vertical Partner Solutions within the Retail, Media, Telco and Financial Services sectors will follow.

A note to Editors:

WareLite BOSS (Business Operating Support System) is an Event Driven Application Server - a grid based, unified software platform for the execution of automated, event driven business processes requiring extreme OLTP. WareLite BOSS allows the introduction of innovative Event Driven Business Solutions within existing systems landscapes - with a zero-impact, evolutionary approach.

WareLite BOSS finds its ideal application in the execution of sensor driven, high performance processes. Sensor technologies used in conjunction with WL BOSS include RFID, Barcode, Indoor Location Tracking, Internet Embedded Devices, GPS, POS etc.
